## Appointments

2022 - Now Associate Professor, Department of EECS, Syracuse University  
2014 - 2022 Assistant Professor, Department of EECS, Syracuse University

## Education

Ph.D. Georgia Institute of Technology (Atlanta, GA USA), 2009-2014  
M.Sc. Fudan University (Shanghai, China), 2006-2009  
B.Sc. Fudan University (Shanghai, China), 2002-2006

## Research Interests

I am interested in the intersection between cybersecurity and systems. My research mission is to bring **systems security and efficiency to large-scale, emerging/evolving infrastructures and applications**. 1) On the cyber-security front, I am interested in applying formal methods, protocol analysis, automated program analysis, and software testing techniques to discover vulnerabilities, detect attacks, and design secure systems. I am also interested in the security-oriented measurement of large-scale systems. 2) On the systems front, I am interested in workload analysis, benchmarking, design of optimization schemes and middleware in various host systems.

My recent research focuses on decentralized systems like public blockchains. I tackle the systems security/efficiency challenges at different blockchain layers, including application-level DeFi protocol, smart contracts, down to the systems-level consensus implementations, P2P networking, and web3.0 infrastructures. I am particularly interested in discovering and fixing design flaws in blockchains and DeFi applications using formal methods. My recent research on blockchain mempool security is well recognized in the Ethereum/blockchain developer community. Besides, I am developing and disseminating blockchain educational materials.

In the past, I worked on confidential computing, trusted execution environments, applied privacy-preserving protocols, and cloud security.
